

How much will it cost?

Depending on where your hot water system is installed, the average home would require a Redwater™ Diverter for the kitchen and one for each additional bathroom.

The investment in a Redwater™ Diverter is AU\$247.50 RRP GST inclusive.

You will require a plumber to install each Redwater™ Diverter and return line.

The average installation would take a plumber 1 – 3 hours.

The cost of materials for the return line will depend on the size of your house and the length required. The return line can be polythene or polybutylene pipe which is cheap and quick to install.

If you waited at your kitchen sink for 1 minute, you could save approximately 9 Litres each time you use the tap!

Most plumbers have a piping system they are familiar with and should be able to make further recommendations.
