

Our Product

The Redwater™ Diverter is a small valve that is installed close to an area where hot water is used, like your kitchen and bathroom. The Redwater™ Diverter can service a single tap - like your kitchen sink, or multiple taps close together - like your bathroom.

Once installed you use your hot tap normally. The Redwater™ Diverter automatically sends the Redwater™/cooled water to a predetermined area such as:

- * Rain water tanks
- * Swimming pools
- * Gardens or garden irrigation
 - * Toilet cisterns
 - * Laundry areas
- * Livestock drinking water

The Redwater is sent to these areas through a return line, which is connected to your Redwater™ Diverter(s).

The Redwater™ Diverter(s) can be retrofitted to almost all existing plumbing systems, and can be easily incorporated into new systems.
